Installation Requirements

- For indoor applications, use Category 5 (or above) UTP cabling approved for indoor use.
- For outdoor applications, shielded Category 5 (or above) cabling should be used for all wired Ethernet connections. To enhance ESD protection, attach a ground wire (not included) to the back panel of the EdgeRouter X.

We recommend that you protect your networks from harmful outdoor environments and destructive ESD events with industrial-grade, shielded Ethernet cable from Ubiquiti Networks. For more details, visit [www.ubnt.com/toughcable](http://www.ubnt.com/toughcable)

Note: Although the cabling can be located outdoors, the EdgeRouter X itself should be housed inside a protective enclosure.

TERMS OF USE: All Ethernet cabling runs must use CAT5 (or above). It is the customer’s responsibility to follow local country regulations, including operation within legal frequency channels, output power, indoor cabling requirements, and Dynamic Frequency Selection (DFS) requirements.

Passive PoE Passthrough

The EdgeRouter X can be powered by either method:

- Power adapter
- 24V passive PoE on the eth0/PoE In port

Passive PoE output on port eth4/PoE Out works as a passthrough and depends on the input power source.

If the included Power Adapter (12V, 0.5A) is used, there may not be sufficient passthrough to power another device because the EdgeRouter X can consume up to 5 watts on its own.

We recommend using a more powerful input power source (not included); here are a few examples of viable power input options for passive PoE passthrough:

* Not compatible with 24V, 1A Gigabit PoE Adapter.
There are two methods to reset the EdgeRouter X to factory defaults:

**Runtime Reset (Recommended)**

The EdgeRouter X should be running after bootup is complete. Press and hold the **Reset** button for about 10 seconds until the *eth4* LED starts flashing and then becomes solidly lit. After a few seconds, the LED will turn off, and the EdgeRouter X will automatically reboot.

**Power-on Reset**

1. Disconnect the *Power Adapter* from the EdgeRouter X.
2. Press and hold the **Reset** button while connecting the *Power Adapter* to the EdgeRouter X. Keep holding the button until the *eth4* LED starts flashing and then stops flashing after a few seconds.

Hardware Installation

Place the EdgeRouter X on a flat, horizontal surface or mount it on a wall (mounting screws not included).

Note: For adequate airflow, keep 20 mm of clearance next to the ventilation holes of the EdgeRouter X.

Connecting Power

Follow the appropriate instructions for your installation:

Connecting Power Using the Power Adapter

Connect the Power Adapter to the Power port of the EdgeRouter X. Then plug the Power Adapter into a power outlet.

Connecting Power Using PoE

Connect the PoE cable of a PoE switch or adapter to the eth0/PoE In port of the EdgeRouter X.
Accessing the Configuration Interface

1. Follow the appropriate instruction for your installation:
   • If you are using the Power Adapter, then connect an Ethernet cable from the Ethernet port of your host system to the port labeled eth0/PoE In on the EdgeRouter X.
   • If you are using PoE, then connect your host system to the PoE switch or adapter.

2. Configure the Ethernet adapter on your host system with a static IP address on the 192.168.1.x subnet.

3. Launch your web browser. Type https://192.168.1.1 in the address field. Press enter (PC) or return (Mac).
4. The login screen will appear. Enter **ubnt** in the *Username* and *Password* fields. Read the Ubiquiti License Agreement, and check the box next to *I agree to the terms of this License Agreement* to accept it. Click **Login**.

The EdgeOS Configuration Interface will appear, allowing you to customize your settings as needed. You can click the **Wizards** tab to access the Setup Wizard.
